# Technical Specifications

*[Bidders must state here either “Comply” or “Not Comply” against each of the individual parameters of each Specification stating the corresponding performance parameter of the equipment offered. Statements of “Comply” or “Not Comply” must be supported by evidence in a Bidders Bid and cross-referenced to that evidence. Evidence shall be in the form of manufacturer’s un-amended sales literature, unconditional statements of specification and compliance issued by the manufacturer, samples, independent test data etc., as appropriate. A statement that is not supported by evidence or is subsequently found to be contradicted by the evidence presented will render the Bid under evaluation liable for rejection. A statement either in the Bidder's statement of compliance or the supporting evidence that is found to be false either during Bid evaluation, post-qualification or the execution of the Contract may be regarded as fraudulent and render the Bidder or supplier liable for prosecution subject to the applicable laws and issuances.]*

8. There should be adequate spaces between each tablet/capsule in a blister pack for a pair of scissors to cut one unit without puncturing the adjacent tablet/capsule.

### **For Intravenous (IV) Fluids**

1. The intravenous fluids must be sterile and pyrogen free. These shall be indicated in the label and the product literature. If not stated in the label

or product literature, the bidder must provide a certification from an FDA accredited laboratory or testing center that the product is sterile or pyrogen free.

2. The fluid must be clear and colorless, with no floating particulate matter.

3. The product label on the intravenous fluid bottle must be clear and readable.

5. The rubber port (dual/twin port) of the intravenous fluid bottle should be durable yet easy to puncture.

6. The volume of the intravenous fluid must be consistent with the product label, and must be accurate when measured at any time during infusion.
7. There must be space for the admixture of additional drugs.
8. The bottle can be measured upside down and in upright position.
9. Plastic bag-container is fully collapsible that does not require external venting for the bag to empty.
10. The holder or hook of the bottle should have adequate tensile strength to allow it to withstand a pressure or weight of the bottle and its content when full.

The Supplier shall provide 1 set of spill kit for every Oncology medicine except for Enteral Nutrition for Cancer Patients, Ondansetron 2mg/ml, 4ml and oral anti-cancer medicines.

1. Expiration must not be less than 12 months at the time of delivery
2. Supplier must specify date of expiration and must be willing to replace the drug at least four (4) months prior to expiry date.
3. Must be accompanied by a chemical assay from country of origin.
4. Since Oncology drugs are sensitive to temperature surges a thermstrip must be included in the delivery box to show that the prescribed temperature (2-8 degrees centigrade) is maintained.
5. Oncology medicines that require ambient temperature must not be mixed with temperature 2-8 degrees centigrade requiring medicine during delivery if coming from the same supplier.
6. The required infusion sets for some drugs like Paclitaxel must be provided for every quantity ordered.
7. If the request for a certain medicine is lyophilized, then the solution should not be substituted, unless this is the only one available. (Reason: Temperature and storage requirements are different).
8. For Oncology medicines with different dosage strength (Doxorubicin 50mg and Doxorubicin 10mg) must have the same brand. (Reason: Traceability if there's Adverse Drug Reaction/Adverse Events)

**For All Intravenous Antibiotics (To be provided during Post-Qualification Evaluations)**

The directions for reconstitution, compatible diluents of IV antibiotics/antivirals, stability and storage of reconstituted solutions should be clearly stated in the drug literature in terms of the time (# of hours stable) under certain temperature(room temperature, (2-8<sup>0</sup>C, etc.)

**For all drug products in Glass ampoules or Vials** the following negative features are unacceptable which include but are not limited to:

1. Powder for injection does not readily dissolve.
2. Presence of impurities and/or sediments after dissolution of intravenous preparation.
3. Intravenous solution leaks through the infusion set or stopper.
4. Difficult to open or when opened have jagged edges

**For Enoxaparine in pre-filled syringe**

Must have calibration for 0.6ml preparations.

**For drug products needs a cold chain management**

Cold chain drugs are sensitive to temperature surges a thermo-strip must be included in the delivery box to show that the prescribed temperature (2-8 degrees centigrade) is maintained.

**For Nuclear Medicine**

1. Packages containing radioactive materials must comply with code of PNRI part 3, part 4 and part 13.
2. Each delivery must be certified safe for patient use with Quality assurance documentation.
